

Getting Started > Session Management > Custom Pages

Custom Pages

To enable custom pages add the following to your Auth.js configuration. In the `pages` object, the key is the type of page and the value is the path/route at which the page is located. Please make sure you actually have a page at the specified route.

[Next.js](#) [Qwik](#) [SvelteKit](#) [Express](#)

TS ./auth.ts

```
import { NextAuth } from "next-auth"
import GitHub from "next-auth/providers/github"

// Define your configuration in a separate variable and pass it to NextAuth()
// This way we can also 'export const config' for use later
export const config = {
  providers: [GitHub],
  pages: {
    signIn: "/login",
  },
}

export const { signIn, signOut, handle } = NextAuth(config)
```

To continue setting up the custom page, checkout our [guide on custom pages](#).
